Professional Summary

Product Designer with 5+ years of experience in AI products, fintech, and e-commerce. I own product design for Pixelbin at Fynd, an AI media platform with 5.3M+ monthly users across six products. Redesigned core user flows to improve engagement by 13% and cut bounce rate by 12.8%. Before this, I shipped BNPL payment systems and built the design system for Jio Commerce Platform. My Master's in Data Science (BITS Pilani) means I can read the data, talk to ML engineers in their language, and make design calls backed by evidence.

Work Experience

Fynd (Shopsense Retail Technologies Ltd.)

Mumbai, India

Product Design Specialist

April 2025 – Present

- Own end-to-end product design for Pixelbin, an AI platform with **5.3M+ MAU** across six products: Pixelbin.io (2.2M), Watermarkremover.io (2M), Upscale.media (1.1M), Erase.bg, Shrink.media, and Convertfiles.ai
- Identified friction points in onboarding and key user flows through usability studies and analytics. Redesigned these flows, bringing **+13% engagement** and **-12.8% bounce rate**. Session duration went up by 31 seconds to 3m 3s
- Design how users interact with AI features: generative image tools, automated video editing, background removal, content enhancement. Decisions around model output presentation, loading states, and error handling for AI that doesn't always return perfect results. These features drive **400K+ new signups per week**
- Work with ML engineers daily to understand what the model can do, then design how users should experience it. Create Figma prototypes for stakeholder reviews and dev handoff

Product Designer III

June 2023 – April 2025

- Designed and shipped Fynd's **BNPL checkout flow** end-to-end: eligibility verification, instalment plan picker, payment confirmation, and post-purchase tracking. Had to balance speed-to-market with RBI compliance requirements, which shaped a lot of the design constraints
- Defined the user journey for credit products: what happens when someone is eligible, partially eligible, or denied. Designed the error and edge-case states that most fintech checkouts get wrong
- Worked with front-end engineers to ship responsive fintech UI across mobile and web. Prioritized what to build first when PM, engineering, and business timelines didn't always agree
- Mentored junior designers on interaction patterns, design system usage, wireframing, and running their own research

Product Designer II

March 2022 – May 2023

- Built the **design system and component library for Jio Commerce Platform (JCP)**: tokens, reusable components, interaction patterns, and guidelines. Used across multiple product teams on a platform serving millions of users
- Ran usability testing on design system components with real users before rolling out platform-wide. Caught issues early that would have been expensive to fix later
- Wrote the style guides and documentation that other teams used for consistent UI and faster dev handoff

mobii

Coimbatore, India

User Experience Designer

May 2020 – February 2022

- Designed interactive prototypes and UI for 10+ client projects in Figma and Adobe XD across web and mobile
- Set up design standards (typography, colour systems, imagery) and delivered projects within timeline and budget

Exalca

UI Designer

Coimbatore, India

March 2020 – May 2020

- Designed interfaces for SAP-based web applications. Built UI components, navigation systems, and information architecture from business requirements and user journeys
- Found and fixed usability issues around responsiveness by testing iteratively with users

Education

Birla Institute of Technology and Science (BITS), Pilani

M.Sc. Data Science & Engineering

October 2022 – October 2024

KGiSL Institute of Technology

B.Tech. Computer Science Engineering

2016 – 2020

Skills

Design Tools: Figma, Adobe XD, Sketch, Photoshop, Illustrator, ProtoPie

Core Skills: User Research, Usability Testing, Interaction Design, Visual Design, Information Architecture, Design Systems, Prototyping, Responsive Design, A/B Testing, Design Reviews, User Journey Mapping

Process: Product Discovery, Product Strategy, Feature Prioritization, Design Thinking, Experimentation, Stakeholder Management, Cross-functional Leadership

Domain: AI/ML Product Design, Fintech UX, Payment Systems, E-commerce, SaaS

Technical: HTML/CSS, SQL, Data Analysis, Product Analytics, Agile/Scrum, Claude Code, Cursor, GitHub Copilot

Certification: Machine Learning Nanodegree (Udacity)
